WRISTLET WATCH WITH ALARM shockproof, 20 jewels

Alarm-Division
The distance between 2 strokes corresponds to 10 minutes.

Alarmhandsetting
The Alarm hand is to be turned contrary to clock direction.

Winding for Time and Alarm side.
Hands to be set backwards and forwards by pulling out the button

Stop button for Alarm
Watch is ringing, when button is pressed in. Alarm is stopped, when button is pulled out

When the watch is fully wound up, the going time of the watch, after the alarm has run down, yet amounts to more than 30 hours.

For special attention! Should accidents make a repair necessary then it is advisable on refitting the back to observe the following: In order to keep the alarm properly functioning the winding button has to stand upright and the case-pin has to fit into the groove of the back. In doing so the stop button is to be pressed in.
