

**Detachable  
Boudoir clock**

Gilt frame. Silver dial with polished raised figures, luminous points and hands. Flat alarm movement with 7 jewels. Polished back bell, dustproof, interchangeable spring barrels.

With curved bow fronted gilt frame. Very smart

**RECTANGULAR**

2 3/4 x 3 1/4 inches

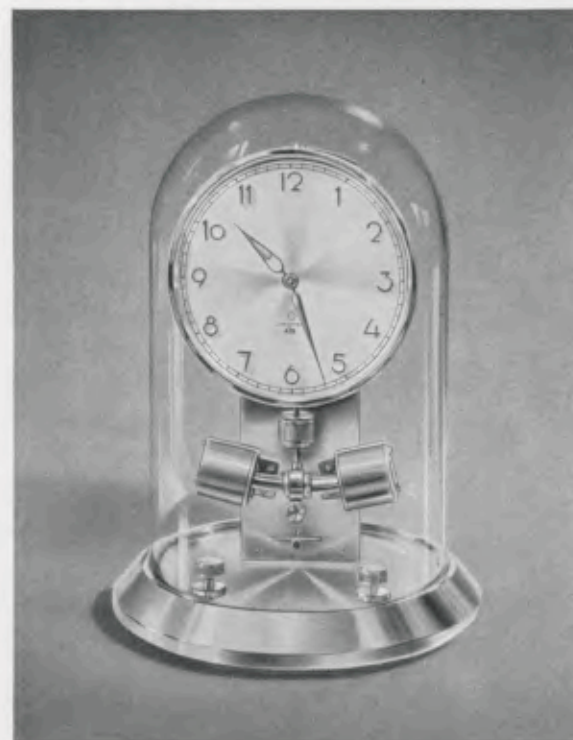

To detach Calotte, unfold strut and push leather case sideways

**0101/7447 RP  
7 JEWELS**

Genuine snake-skin, green

**0101/7448 RP**

Genuine snake-skin, brown

on weak-current battery

#### Short description of the ATO clock

The ATO clock is a weak-current clock which derives its impulse from a special dry battery through the pendulum. The current consumption of this battery is so small that it lasts at least three to four years. The pendulum with the nickel steel rod takes care of variations in temperature. Timekeeping results are achieved which are not obtained from any mechanical or electrical clock at equal prices.

#### Advantages of the electric weak-current ATO 1000 day clock

Independent from the mains. No cable required. No disturbances from radios. Dry battery power, therefore no attention and slight consumption costs. Dry battery lasting for several years. Excellent timekeeper, as evidenced by numerous testimonials.

#### The impulse system of the ATO clock

requires that the clock is not placed in the vicinity of large iron masses such as safes, concrete walls, pipelines or similar objects. In addition it is essential that the ATO clock is put up on a solid and dry place free from vibration. Every change of place calls for a new regulation of the clock due to the electrical pendulum impulse.
