

JUNGHANS – The Company

Schramberg is not perhaps one of the best known towns, but it has definitely not gone unnoticed in the watch and clock-making industry. JUNGHANS Uhren GmbH, the third-largest quartz watch and clock producers in the world, is located here in the district of Rottweil. JUNGHANS is a company with its fair share of tradition and is never short of new ideas.

More than 60,000 watches and clock movements are produced in Schramberg every day using modern automated watch and clock-making facilities. Ultramodern electronic equipment monitors and controls very high quality standards in all production processes.

JUNGHANS manufactures electronic wrist watches, alarm clocks, wall and mantel clocks, quartz movements, solar and radio-controlled clocks and watches. All of very high quality, accuracy and functionality using the most modern, future-orientated technologies. All good reason why JUNGHANS enjoys the image of an innovative watch and clockmaker.

Radio-controlled and solar clocks and watches are amongst the most popular on today's market. The first radio-controlled solar watch in the world, the JUNGHANS RCS 1, is proof of the great innovative strength and highest technological standards at JUNGHANS.

JUNGHANS brought out the world's first radio-controlled solar watch – the JUNGHANS RCS 1 – only 4 years ago lending these new technologies a new perspective.
