

## Collection Junghans Quartz Sensor Control: alarm and reminder clocks.

When you cannot sleep for as long as you would otherwise wish to, you should at least be woken up in a pleasant manner. The Junghans Sensor Control is unrivalled in its ability to wake you up in a gentle, but, at the same time, persistent way. The alarm begins softly and becomes louder until it reaches a volume which it is impossible to overhear, sounding for approx. 2 minutes. Its best aspect, however, is that nearly everything that the Junghans Sensor Control can do is achieved by a simple wave. You only need to pass your hand over the sensor spot. For example, if the alarm sounds and you wish to sleep a little longer, a wave is sufficient to silence the Junghans Sensor Control. However, it will sound again in approx. 4 minutes time and keep doing so until you finally switch it off. Or, at night-time, if you want to know what the time is, simply wave and the dial light will come on for approx. 3 seconds without affecting the alarm time set. Incidentally, since the sensor is highly sensitive, we have fitted it to the top of the alarm clock so that it cannot be activated unintentionally.

### The Junghans Sensor Control with state-of-the-art sensor technology:

It is slim, small and compact, a design feature made possible by the systematic development of sensor technology. In addition, it requires only one battery - unique for a sensor alarm clock.

## Collection Junghans Quartz alarm and reminder clocks.

Wealth and diversity of ideas are what distinguishes the Junghans quartz alarm clock collection, especially the new models with luminescent Luminova dial and attractive case for travelling and at home.

The Luminova dial stores daylight or artificial light and is then luminescent throughout the night. Duration of luminescence: approx. 8 hours. Luminova is environment-friendly.

### Junghans Luminova Wecker mit selbstleuchtendem Zifferblatt

- Quartz movement W 710
- Runs for at least 1 year on a single battery
- Pleasant, intermittent alarm signal
- Environment-friendly luminescent Luminova dial
- Single-button operation
- Switch-off button on top
- Case made of high-grade plastic
- Dimensions: 8,2 x 7,2 cm

140/1140 black  
140/1141 red

### Junghans Luminova Reisewecker mit selbstleuchtendem Zifferblatt

- Superslim folding case
- Quartz movement W 740
- Runs for at least 1 year on a single battery
- Pleasant, intermittent alarm signal
- Environment-friendly luminescent Luminova dial
- Separate buttons for time setting and alarm setting
- Switch-off button on top
- Case made of antistatic, impact-proof ABS material
- Dimensions: 8,0 cm diam.
